Need Some Help With Line Cleaning Chemicals?

You Need A Beer Line Cleaner Guide

From Keg To Glass

PROTON GROUP
Your formula for total hygiene

Purple Beer Line Cleaner.

Is a blend of caustic, water softening agents and chlorine with a special chemical that gives it a purple colour.

Some people may prefer to use Purple Line Cleaners because it is easier to see, indicating that your dispense lines are full of cleaning solution. This helps to prevent accidental spillage or people drinking it.

Purple Beer Line Cleaners will also change colour to grey/blue or yellow in lines that contains deposits of yeast and bacteria which indicates the line is very dirty.

Prosan Plus is our purple line cleaner

Protinate is our Heavy Duty clear line cleaner

Clear Beer Line Cleaner.

These are very similar to Purple Line Cleaners but can be made to be more concentrated (Also called Heavy Duty).

At Proton our clear line cleaner was designed for customers who are having issues with line hygiene or live in very hard water areas.

When using Clear Line Cleaners you should use special test strips to detect if your lines contain cleaning solution, if there is line cleaning solution present they will turn a bright pink.

Beer Line Cleaner

Do's

- ✔ Read all the instructions carefully before you start cleaning.
- ✔ Clean dispense lines at intervals recommended by the brewery.
- ✔ Follow all the instructions properly to ensure a full clean of the lines.
- ✔ Ensure the cleaning vessel is empty and clean before you start.
- ✔ Only use the recommended dosage rate of beer line cleaner.
- ✔ Avoid contact with your skin and eyes.
- ✔ Wear appropriate safety clothing, especially gloves and eye protection.
- ✔ Only use plastic cleaning vessels.
- ✔ Store safely away from customers, especially children.
- ✔ Store in a cool place away from direct sunlight.

and Don'ts

- ✘ Put in any other bottle or storage container.
- ✘ Use hot or warm water.
- ✘ Leave in dispense lines for longer than recommended.
- ✘ Mix with any other chemical especially acids.
- ✘ Use in any metal containers.
- ✘ Use more than the recommended amount to clean.
- ✘ Use for anything other than cleaning dispense lines.
- ✘ Store in the same area as acid cleaners.
